

Nicopal

SCIENTIFIC PALETTES FOR DATA & DESIGN

Nicopal is a Python library providing modern, perceptually uniform and colour-vision-deficiency friendly color palettes.

Sequential

Arsenic

Boron

Carbon

Cesium

Chlorine

Iodine

Iridium

Krypton

Magnesium

Manganese

Neon

Nitrogen

Oxygen

Radium

Selenium

Silver

Tin

Uranium

Xenon

Zinc

Diverging

Cobalt

Iron

Mercury

Lithium

Nickel

Osmium

Rubidium

Sodium

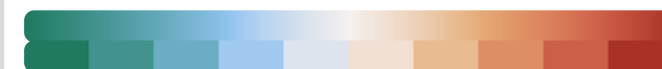

Silicon

Sulfur

Vanadium

Hybrid

Sequential

Ideal for representing ordered or progressive data.

Diverging

Ideal for highlighting deviations around a central point.

Hybrid

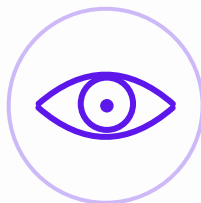

Ideal for everyday work charts.

Usage

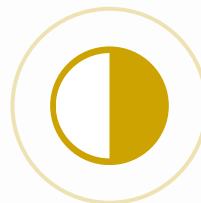

```
import nicopal as ncp
cmap = ncp.pa1("Boron")
```

[Nicopal](#)

PERCEPTUAL UNIFORMITY

Carefully crafted to ensure smooth gradients and balanced luminance.

COLORBLIND FRIENDLY

Accessible palettes for inclusive and accurate visual communication.

VERSATILE

Ideal for heatmaps, plots, maps, dashboards and scientific visualization.

PYTHON FRIENDLY

Easy to use for coding, with a wide range of functionalities.
